

Parenting for the New Teen

Preface

This Text deals with the peculiarities and problems of the teenagers, meaning, adolescents and their parents. Adolescence is the period of rapid growth during which sexual maturation occurs and the child becomes an adult.

The anatomy and physiology of the reproductive organs are explained and common problems of adolescence such as pimples, faulty posture, masturbation and menstrual disorders are discussed. The dangers of smoking, alcohol and drug addiction are stressed upon.

Teenagers should strive to establish their identity by continuing education and acquiring skill and proficiency in the selected subjects and imbibing good qualities so that they can become good husbands or wives and later responsible parents and citizens.

Friction between teenagers and their parents is a common story. Important hints are given to both teenagers and their parents, so that the teenagers can pass through adolescence smoothly and develop better ties with their parents.

This Text gives in detail the duties of parents and discusses the practical problems faced by parents in rearing and guiding their teenagers. The various defects in the personalities of parents and the common mistakes committed by them in rearing their teenagers are also discussed.

I am sure this Text will help both teenagers and their parents to understand each other. It will help parents guide their teenage children tactfully and give them an insight for becoming better parents. - **Authors**

Index

Chapter 1: Teenager and Adolescents	15
1. Difference between Teenagers and Adolescents	15
2. Goals of Teenagers Male Reproductive Unit and System	15
3. Structure of Sperm	19
4. Sperm formation and its passage	19
5. Difference in location of testes and ovaries	20
6. Variation in size of right and left testes	21

7. Absence of one or both testes in some children and its effect on sexual development during adolescence	21
8. Structure and length of the penis	22
9. Relation of the size of the penis to sex urge or fertility Female Reproductive Unit and System	23
10. Structure of the ovum	23
11. Number of ova produced by a female	24
12. Reproductive system of a female	25
Chapter 2: Hormones and Teenagers' Problems	28
1. Hormones	28
2. Functions of hypothalamus	28
3. Pituitary gland	30
4. Hormones secreted by Anterior Pituitary gland and their function	30
5. Hormones secreted by Posterior Pituitary gland and their function	32
6. Hormones secreted by thyroid gland and its function	32
7. Male sex hormone and its functions	32
8. Suprarenal's, their structure and function	33
9. Diseases caused by abnormal function of Suprarenal Cortex	34
10. Hormones secreted by thyroid gland and its function	34
11. Goitre of puberty	35
Chapter 3: Secondary Sex Characteristics	36
1. Onset of Puberty	36
2. Appearance of secondary sexual characteristics in boys	36
3. Appearance of secondary sexual characteristics in girls	37
4. Appearance of secondary sexual characteristics in puberty	38
5. Change of voice during adolescence in boys	38
6. Delayed puberty	38

Chapter 4: Menstruation	39
1. Menstruation	39
2. First menses in girls - Menarche	39
3. Relation of menarche and height	40
4. Regularity of monthly period	40
5. Cessation of monthly period - Menopause	41
6. Untouchability of a menstruating lady - tradition in India	42
7. Common menstrual disorders	42
8. Effect of climacteric or Menopause	43
9. Misconceptions about menopause	45
Chapter 5: Breasts	47
1. Structure of Breasts	47
2. Factors controlling the size of breasts	47
3. Misconceptions about breasts in adolescent girls	48
4. Measures for increasing size of breasts	49
5. Asymmetric enlargement of breasts in adolescent girls	50
6. Prominent breasts in an adolescent boy	50
Chapter 6: Normal variation in sexual maturation and stature	52
1. Early sexual maturation - Precocious puberty	52
2. Causes of delayed sexual maturation	53
3. Adolescents (14 to 15 years) looking younger (8 to 9 years)	53
4. Causes of short stature	54
5. Measures to increase the height of a child	55
6. Causes of tall stature	55
7. Measures to reduce the height in girl	56

8. Causes of faulty posture	56
Chapter 7: Skin and Hair	58
1. Pimples - their management	58
2. Lines appearing over skin of thigh, buttocks and shoulders in adolescents	58
3. Difference in distribution of hair in men and women	59
4. Hairy girls	60
5. Causes of baldness	60
Chapter 8: Growth and development	61
1. Growth and development of teenagers - characteristics and its practical implications	61
2. Nutritional requirements during adolescence	64
3. Improving one's interest and concentration in study	65
4. Becoming a successful group leader	67
Chapter 9: Smoking and Drug addiction	69
1. Smoking or tobacco chewing - injurious to health	69
2. Drug addiction	71
3. Effect of drugs that can cause addictions	73
4. Suspecting drug addiction in a child	78
5. Common drugs causing addiction	79
6. Factors impelling young people to seek drugs	81
7. Treatment of a drug addict	83
Chapter 10: Teenager - Parent interaction	86
1. Parents grumbling about their teenager	86
2. Thoughts and behaviour of adolescent children	88
3. Avoiding friction between adolescents and parents	89
4. Generation gap	91

5. Narrowing generation gap	91
6. Hints to tackle teenagers tactfully	95
7. Training teenager to live a happy and peaceful life	97
