

How to cultivate medicinal plants?

Preface

The soil, water, environment, etc. need to be considered before cultivating medicinal herbs just like in agriculture and horticulture. This has been analysed in this Text. Natural fertilizers and pesticides at the physical level along with *Yantras*, remedies, *mantras*, etc. at the spiritual level are essential for the holistic cultivation of medicinal plants. Analysis of both the levels is the unique feature of this Text. We pray at the Holy feet of *Shri Guru* - 'May the readers be able to grow medicinal plants in a scientific manner after studying this Text'. - **Compilers**

Index

Contents	
1. Aspects to consider before cultivating medicinal plants	9
2. How to grow plants in pots & how to take care of them ?	9
